Servicing 156 countries in 13 languages

Registered in England & Wales:

Company Registration No: 05479601

VAT Registration No: GB840431165

We're experienced in staging and configuration across a range of domains and we'd love to help you.

Staging makes sense

'Staging' or pre-preparing telecoms hardware before transporting it to the place of installation is an ideal way to save time on site. However it's important to work with a partner who you know will deliver the correct equipment on time and configured to your exact requirements.

Outsourcing your staging and configuration requirements makes commercial sense. Since most work is carried out in a lab beforehand, it ensures that valuable engineering hours aren't being wasted on site. Your engineers can start deploying solutions without delay, making them more efficient, saving you time and money.

It's also important to remember that pre-staging detects and possible faults or defects with equipment before its deployed to site. This means that no surprises are found on site, with out-of-box failures being eliminated before the technician even arrives.

Elements of staging

Staging gives equipment a 'plug and play' element, safe in the knowledge that it's proven to be in perfect working order. Here's the elements of staging:

- Physical build of the system
- Inserting the required cards into the shelf
- Connecting the cabling for power
- For network – inserting power supplies and accessories e.g. optical transceivers

Configuration

An integral part of the staging service includes configuration. This is key for allowing a speedy set up and makes the service bespoke to the individual. You tell us your exact configuration needs and then we can optimise the equipment, ensuring it's set up for use.

Elements of configuration that the client can choose to be applied include:

- Correct features and settings
- Which ports to be enabled
- User accounts setup
- Software versions to match the current set up in the production network

Logistics

We can support the final part of the process, transporting the system from our lab to the place of installation. We even deliver the equipment to the 'tile' or precise location within the data centre, so it's ready to plug in and use straight away.

Taking confidentiality seriously

We are fully equipped to securely handle large scale deployments. Our expert team of engineers have the appropriate experience and are familiar with the operation of the equipment. Putting you in great hands.

All jobs are considered highly confidential. Due to this nature, our staff are security cleared and our site is appropriately secured and covered by CCTV. As for performing the staging and config service, we operate a secure cage with dedicated connectivity for authorised personnel only.
